

Intentional: left out a lot of instructions for you to figure it out. Don't worry about CSS and JavaScript for now

Duration: 30min **MAKE all Pages .PHP** Open Book Quiz : working with Database

PhpMyAdmin

- Create a database called "class_prac_db"
- Create two tables
 - parent_table:
 - p_id int, primary key, auto increment
 - p_name varchar (50), not null
 - child_table
 - c_id int, primary key, auto increment
 - pa_id int, foreign key, not null
 - child_name varchar (50), not null

Pages

- A mini web application that stores parents and child information
- Create a page that shows
 - An input field for parent name
 - An input field for parents' child name
 - A submit button

When you click on submit, parent data is inserted into "parent_table" and child into "child_table" accordingly.

Hint:

- *You need to know how get the id of the parent for the child's insert*
- *you need a database connect*
- *test your database connection*
- *write your query*
- *execute your query*

Submission: zipped file

- the database sql
- php files
